## Type CPM/CPL plug-in loadcentres

### Product description

Loadcentres feature factory installed main lugs or main breakers. The BR interiors are manufactured of formed, plated aluminum. Eaton also supplies a full line of Eaton brand BR, DNPL, GFCB and GFEP type branch circuit breakers and accessories for these loadcentres.

### Product application

Designed for the protection and distribution of single and multi-dwelling residential and light commercial loads to 120/240 volts AC, such as lighting, heating, appliance and small motor branch circuits.

All main breaker combination loadcentres are CSAT listed for use as service entrance equipment.

### Ratings

Single-phase, three-wire, 120/240 volts AC and three-phase, four-wire, 120/208 volts AC. Mains through 400 A. Available with up to 84 branch circuits. Main breakers on 150 and 200 A panels are rated at 25,000 AIC.

### Metal enclosure specifications

Enclosures are made of 16 gauge sheet steel, either galvanized or epoxy painted. These coatings provide superior corrosion protection. All trims used on BR loadcentres are chromate sealed and finished with an electro-disposition epoxy paint in grey (ANSI-61) or white, which exceeds requirements for outdoor and indoor applications. A combination surface/flush cover with integral door is supplied with indoor loadcentres rated from 100 through 400 A.

All plug-in loadcentres are CSA listed to file LL98266. CSA certified to C22.2 No.29.

### Warranty

10 year limited.

a Type BR—100 A 10 kAIC main circuit breaker is factory installed (BR2100).

b High Interrupting BRH breakers are available on **page 15**.

c BR2125 main breaker is factory installed.

d Suffix WL denotes “white loadcentre” painted tub and trim.

e Factory installed 25 kAIC main breaker.

f DK breaker is a 65 kAIC, factory-sealed breaker.

g Restricted due to available neutrals, extra neutrals are available on **page 13**, which will expand available circuitry to a maximum of 84 circuits.

h 3TA401K must be ordered separately for #2/0-500-MCM.

a 25 per package. Catalogue number represents one package.

b 50 per package. Catalogue number represents one package.

c Includes trim, door, and deadfront.

d 100 per package. Catalogue number represents one package.

e Except R3CCPL103.

f Kit includes 25 pieces.

g Line/Load terminals supplied only. Neutral conductor must be purchased separately. See above listed kits.

h Neutral bolts to main neutral bar i.e. remove screw and install lug kit.

i Kit includes 2 neutral bars.

j Kit includes 1 neutral bar.

k Comes with a set of keys.

## Plug-in circuit breakers for CPM/CPL

### Type BR, DNPL, GFCB, GFEP, and GFXB

#### BR circuit breakers

Eaton Type BR plug-in breakers in the standard 1-inch per pole moulded case and can be used as main and/or branch disconnect devices. All are CSA and UL listed. Typical ampacity range for BR breakers is 15 through 125 A. <sup>a</sup>

#### FIRE-GUARDE arc fault circuit interrupter (AFCI)

The FIRE-GUARD arc fault circuit interrupter (AFCI) is a residential circuit breaker with an integrated processor which recognizes the unique current and/or voltage signatures associated with arcing faults, and acts to interrupt the circuit to reduce the likelihood of an electrical fire. With the Eaton Fire-Guard AFCI, protection from arcing faults is combined with conventional thermal and magnetic overloads as found in standard residential circuit breakers protecting wiring from excessive heat or damage due to overloading or short circuits. Fire-Guard AFCI can also be equipped with 5 mA ground fault protection to protect from personal shock hazards. Now, there is a residential circuit breaker that provides protection from arcing faults, conductor damage due to thermal overloads and short circuits, as well as 5 mA ground fault protection in one integrated design.

#### GFTCB people protection breakers

Eaton Type GFCB (ground fault circuit breaker) combines state-of-the-art electronic technology with a circuit breaker mechanism in a compact 1-inch per pole moulded case. The GFCB automatically

senses hot wire-to-ground faults in a 4 to 6 mA range and shuts off the power thus providing an extra margin of safety beyond that of conventional circuit breakers. GFCB applications include bathrooms, basement outlets, swimming pools, outdoor branch circuits and kitchen branch circuits. Self testing compliant to new codes. Type GFCB breakers are also available in 30 mA equipment protectors. 30 mA breakers are for equipment requiring a higher interrupting value such as heat tracing.

#### DNPL twin circuit breakers

DNPL plug-in breakers have the same construction as Eaton Type BR 1-inch per pole devices except that two single-pole circuits are provided in a 1-inch space. <sup>a</sup> CSA listed interrupting rating is 10,000 AIC. All ratings are CSA and UL listed.

#### DNPL quad circuit breakers

QuadplexE construction of Eaton Type DNPL plug-in breakers provides various combinations of two-pole and single-pole devices in a 2-inch moulded case. All plug-in breakers are approved for HACR applications. <sup>a</sup>

- All ratings are CSA and UL listed
- CSA certified to C22.2 No. 5, file LR3300
- All loadcentre breakers are GOS listed for conformity

<sup>a</sup> Single-pole 15 and 20 A units are switching duty (SWD) rated.

**Type BR single- and multi-pole**

Type BR <sup>ab</sup>

- 10,000/22,000 A interrupting capacity at 120 Vac, 120/240 Vac, and 240 Vac
- Two- and three-pole versions feature a common trip

**Type BR arc fault circuit interrupter**

Type BR arc fault circuit interrupter circuit breakers

- 10,000 A interrupting capacity at 120 Vac, 120/240 Vac, and 240 Vac

An arc fault circuit interrupter is a device intended to provide protection from the effects of arc faults by recognizing characteristics unique to arcing and by functioning to de-energize the circuit when the arc fault is detected. As of January 1, 2015, the Canadian Electrical Code now requires that all branch circuits that supply 125 V, single-phase, 15 and 20 A receptacle outlets installed in dwelling unit shall be protected by a combination arc fault circuit interrupter(s) (series arc and parallel arc detection).

**Table 14. Single- and two-pole plug-in AFCI circuit breakers**

a For use with copper wire only.

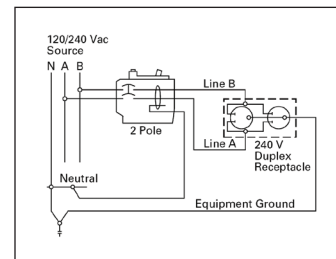

**Ground fault application note**

Single-pole ground fault circuit breakers (GFCBs) are designed for use in two-wire, 120 Vac circuits. **Figure 5** shows a typical wiring configuration. Two-pole GFCBs are designed for use in three-wire, 120/240 Vac circuits, 120 Vac multi-wire circuits employing common, neutral and two-wire, 240 Vac circuits obtained from a 120/240 Vac source. **Figure 6** and **Figure 8** illustrate typical wiring configurations for 120/240 Vac multi-wire circuits. **Figure 7** depicts a 240 Vac, two-wire circuit.

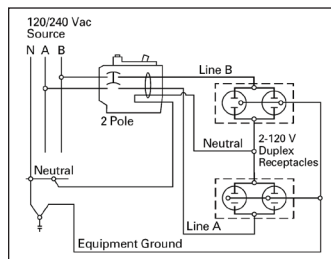

**Note:** The “panel neutral” conductor connects to the neutral bar, even though the neutral is not included in the load circuit. This connection is necessary to supply a 120 Vac power source to the ground fault sensing circuit. The figures are shown with a 120/240 Vac, single-phase, three-wire power source, but are also applicable to a 120/208 Vac, three-phase, four-wire power supply. For all figures, the electrical operation of the GFCB is not affected by the equipment ground.

Electronic breaker lockoff (escutcheon mounted): Type BR long body AF/GF	1	<b>BRLAFGFLOFF</b>
Electronic breaker lockoff (escutcheon mounted): Type BR compact body AF	1	<b>BRCAFLOFF</b>

<sup>a</sup> Must be purchased in multiples of ordering quantities indicated.

<sup>b</sup> Refer to your local Eaton sales representative for handle position changeability chart.

### Definitions

Handle ties: Devices used to join two similar independent single-pole circuit breakers to form a two-pole non-common trip breaker.

Handle lockoffs: Devices that use a padlock to lock a circuit breaker's handle in either the ON or OFF position.

Handle lockdogs: Devices used to secure a circuit breaker's handle in the ON or OFF position. They are not padlockable devices.

Escutcheon mounted: A semipermanent mounting to the face of the circuit breaker and secured by the loadcentre's deadfront cover.

Handle mounted: A mounting made directly to the handle of the circuit breaker by means of a set screw.

Screw mounted: A permanent mounting to the face of the circuit breaker by means of a non-removable screw.

## Plug-in OEM loadcentre interior assemblies

### Product description

As a leader in the electrical distribution equipment business, Eaton has a unique product offering for equipment manufacturers, panel builders and virtually any OEM that has a need for power distribution within their equipment. The OEM interior offering consists of a wide variety of power distribution options utilizing components from Eaton's BR Loadcentre product lines. With high-volume, standardized products, OEMs can expect to receive high-quality products covering configurations meeting virtually any power distribution need.

Coupled with Eaton's expertise in circuit breaker design and manufacturing, our OEM interiors provide solid power distribution and circuit protection in a compact, easy-to-install package.

### Product offering

The BR interiors are manufactured of formed, plated aluminum, and use the Eaton Type BR 1.00 inch (25.4 mm) wide circuit breaker by Eaton. This design affords customers the most circuit flexibility as many of these interiors allow the installation of standard single- and two-pole breakers as well duplex (two-pole in a 1.00 inch (25.4 mm) space) or quadplex (four-pole in a 2.00 inch (50.8 mm) space) breakers. The stab rating of the BR interiors is 140 A maximum, meaning that the handle rating of the breakers that are mounted across from one another may not exceed 140 A.

The interiors are designed for either horizontal (single-row breaker mounting), or vertical (double-row breaker mounting).

### Product selection

## Standards and certifications

### Canadian Standards Association listing

All single- and two-pole, 120/240 V breakers, both 1-inch (25.4 mm), 1/2-inch (12.7 mm) and 3/4-inch (19.1 mm) per pole, 225 A maximum, are listed as certified by the Canadian Standards Association, Guide No. 69-11.19, Class 1432, File 18328.

### Underwriters Laboratories listing

All grounding bars manufactured comply with Underwriters Laboratories standards and are listed under Guide No. DHJR, File E31424, Volume W, Section 17.

All circuit breakers 10 A and larger comply with the Underwriters Laboratories "Standard for Branch Circuit and Service Circuit-Breakers" UL 489; Guide No. 60 10.2 File E31424, and "Requirements for Wire Connectors and Soldering Lugs," UL 486B, Guide No. 461 10-C File E7830.

All Eaton breakers where marked, are suitable for use with 60/75 ° rated wire, unless otherwise specified.

All devices comply with the 22–10 kAIC UL series connected components File DKS2 of the Recognized Components Index.

## Type CH plug-in loadcentres

### Product description

Loadcentres feature factory installed main lugs or main circuit breakers. The CH interiors are manufactured of formed, silver flash plated copper. Eaton also supplies a full line of Type CH branch circuit breakers and accessories for these loadcentres.

### Product application

Designed for the protection and distribution of single and multi-dwelling residential and light commercial loads to 120/240 volts AC, such as lighting, heating, appliance and small motor branch circuits. All main circuit breaker combination loadcentres are CSA listed for use as service entrance equipment.

### Ratings

Single-phase, three-wire, 120/240 volts AC. Mains through 200 A. Available with up to 120 branch circuits. Main breakers on 100 and 200 A panels are rated at 35,000 AIC.

### Metal enclosure specifications

Enclosures are made of 16 gauge galvanized sheet steel powder coated sandalwood beige. The galvanized coating provides corrosion protection. Trims are similarly scratch-resistant powder coated a sandalwood beige colour to match the tub. A combination surface/flush cover with integral door is supplied.

All plug-in loadcentres are CSA listed to file LL98266.

### Warranty

Limited lifetime.

## Type CH plug-on neutral loadcentre features and benefits

#### Ample cable entry knockouts

- Sidewall, endwall, and backplane locations
- Standard sizing for service entrance and branch circuit cabling

#### Commercial grade main circuit breaker

- 35 kAIC series rated main circuit breaker
- Highest in the industry

#### Attractive sandalwood finish

- Esthetically appealing, scratch-resistant powder coating
- Both tub and trim are painted

#### Silver flash plated copper bus

- Provides superior connectivity

#### Patented stab design

- Unique design provides a tight connection to the bus
- Prevents the misapplication of non-approved branch circuit breakers

#### Large service entrance section

- Straight-in wiring saves labour and material
- Large cable bending space

#### Inboard neutral connections

- Provides direct neutral connection for plug-on style ground fault and arc fault circuit breakers
- Ample additional 2/0 lugs provided—no kits necessary

#### Steel backpan

- Reliable breaker mounting
- One-piece design provides superior stability

#### Drywall marking on enclosure

- Indicates proper mounting depth for flush mounting applications

#### Single keyhole mounting

- One keyhole at the top and bottom provides easier mounting and leveling

**Combination and non-combination single-phase**

**Type CH arc fault circuit interrupter**

Type CH arc fault circuit interrupter circuit breakers <sup>a</sup>

- 10,000 A interrupting capacity at 120 Vac, and 120/240 Vac
- Plug-on neutral style for plug-on neutral type CH loadcentres

A combination type arc fault circuit interrupter is a device intended to mitigate series and parallel arcing faults in the complete circuit, including connected cords. Parallel arcing faults can occur from line to neutral or line to ground. These arcing faults are in parallel with the load and produce the most energy of all arcing faults.

**Table 33. Single- and two-pole plug-in FIRE-GUARDE AFCI circuit breakers**

Ampere rating	Wire size range (Cu/Al 60 °C or 75 °C) (AWG)	Configuration	Catalogue number	
			Single-pole, 120/240 Vac 10 per shelf carton 10 kAIC	Two-pole, 120/240 Vac 5 per shelf carton 10 kAIC <sup>bc</sup>
15	#14–4	Standard	<b>CHFCAF115</b>	—
15	#14–4	Common trip	—	<b>CH215CAF</b>
15	#14–4	Plug-on neutral <sup>d</sup>	<b>CHFCAF115PN</b>	—
20	#14–4	Standard	<b>CHFCAF120</b>	—
20	#14–4	Common trip	—	<b>CH220CAF</b>
20	#14–4	Plug-on neutral <sup>d</sup>	<b>CHFCAF120PN</b>	—
			Requires one ¾-inch (19.1 mm) space	Requires two ¾-inch (19.1 mm) spaces

- <sup>a</sup> Not for use in Type BR loadcentres i.e. CPM or CPL prefixed catalogue numbers.
- <sup>b</sup> Common trip refers to two-pole 240 V load application sourced by 120/240 Vac (see **Figure 17**).
- <sup>c</sup> Independent trip refers to two-pole multi-wire, home run or shared neutral circuits (see **Figure 16** and **Figure 18**).
- <sup>d</sup> Only for use in the Type CH plug-on neutral style of combination and non-combination loadcentres.

**Figure 15. Single-pole, single 120 V load application sourced by 120/240 Vac**

**Figure 16. Two-pole, shared neutral with multi-duplex receptacle application**

Requires one ¾-inch (19.1 mm) space Requires two ¾-inch (19.1 mm) spaces

<sup>a</sup> 60 A breaker listed for 75 °C Cu wire only.

**Ground fault application**

Single-pole ground fault circuit breakers (Type CHGFIs) are designed for use in two-wire, 120 Vac circuits. **Figure 19** shows a typical wiring configuration. Two-pole ground fault circuit breakers (Type CHGFIs) are designed for use in three-wire, 120/240 Vac circuits, 120 Vac multi-wire circuits employing common, neutral and two-wire, 240 Vac circuits obtained from a 120/240 Vac source. **Figure 20** and **Figure 21** illustrate typical wiring configurations for 120/240 Vac multi-wire circuits. **Figure 22** depicts a 240 Vac, two-wire circuit. Note the “panel neutral” conductor connects to the neutral bar, even though the neutral is not included in the load circuit. This connection is necessary to supply a 120 Vac power source to the ground fault sensing circuit. The figures are shown with a 120/240 Vac, single-phase, three-wire power source, but are also applicable to a 120/208 Vac, three-phase, four-wire power supply. For all figures the electrical operation of the Type CHGFI is not affected by the equipment ground.

Type CH two-pole GFCI circuit breaker

<sup>a</sup> Kit includes 25 pieces.<sup>b</sup> Comes with a set of keys.<sup>c</sup> Kit includes 25 pieces.<sup>d</sup> Kit includes 20 pieces.**Definitions**

Handle ties: Devices used to join two similar independent single-pole circuit breakers to form a two-pole non-common trip breaker.

Handle lockoffs: Devices that use a padlock to lock a circuit breaker's handle in either the ON or OFF position.

Handle lockdogs: Devices used to secure a circuit breaker's handle in the ON or OFF position. They are not padlockable devices.

Escutcheon mounted: A semipermanent mounting to the face of the circuit breaker and secured by the loadcentre's deadfront cover.

Handle mounted: A mounting made directly to the handle of the circuit breaker by means of a set screw.

Screw mounted: A permanent mounting to the face of the circuit breaker by means of a non-removable screw.

## Type CBM bolt-on loadcentres

### Combination (main circuit breaker) single- and three-phase aluminum bus

#### Single-phase 120/240 Vac Type 1 (indoor) loadcentres

- CSA certified only (not UL approved)
- Utilize Type BAB, QBHW, QBA, DNBA, or QBGF circuit breakers as branch circuit breakers

Circuit breaker directory card 1–42 (package of 50)	1	<b>DIRCARD42</b>
Circuit breaker directory sleeve (package of 25)	1	<b>DIRSLEEVE</b>
Loadcentre door lock	1	<b>TDL</b>
Isolated ground kit	1	<b>ISGRD</b>

### Definitions

Handle lockoffs: Devices that use a padlock to lock a circuit breaker's handle in either the ON or OFF position.

Handle lockdogs: Devices used to secure a circuit breaker's handle in the ON or OFF position. They are not padlockable devices.

## Manual transfer switches/generator panels

### Product description

A transfer switch panel is a device that is mounted next to or incorporated within the loadcentre (distribution panel) in the home or small business. The transfer switch panel is used in conjunction with an emergency generator (usually supplied by others) and serves the purpose of turning selected circuits on and off during a power outage. The transfer switch panel allows the owner to start up a generator and then restore power to critical circuits when utility power is not available.

The owner designates which circuits are critical such as their refrigerator, furnace, and certain lighting loads. Sometimes called emergency power panels, emergency generator panels, gen. panels, transfer switches or emergency panels; transfer switch panels provide the homeowner or small business owner with a safe and easy way to continue using essential electrical loads when utility power is not available.

### Application description

Transfer switch panels are most often used in residential, agricultural and light commercial applications. Comfort and safety are key concerns of many homeowners who are dependent on an uninterrupted supply of electricity.

The increase in our dependence on power is due in part to the popularity of home business and in-home care. In addition, various rural and urban regions in North America experience periodic power outages due to extreme weather conditions such as ice and snowstorms, heat waves, tornadoes or hurricanes. Regions such as Pacific, Atlantic, and Central are the strongest markets for portable generators and transfer switch panels.

### Features, functions, and benefits

Eaton offers two unique manual transfer switch emergency power solutions.

- Manual transfer switches or a generator sub-panel
- Combination service entrance loadcentre with generator sub-panel

## IMPORTANT

**BEFORE INSTALLATION, CONSULT APPROPRIATE ELECTRICAL CODES.  
INSTALLATION INFORMATION IS INCLUDED IN THE CARTON.**

### Manual transfer switches/generator panels

- Main utility and emergency (generator) breaker factory installed
- Available in 30 and 60 A design
- Utility breaker and generator breakers are mechanically interlocked to protect equipment and personnel by preventing dangerous dual-source feeding
- Critical loads permanently connected to allow for quick and convenient switching from utility power to stand-by generator power
- Designed for switched neutral applications. Can be reconfigured in field for non-switched neutral applications
- Sturdy and reliable 125 A rated aluminum bus design
- Type BR/DNPL branch breakers sold separately
- Ideal for new and retrofit installations
- EEMAC 1 indoor enclosure design
- Standards and certifications
- CSA approved

### Product specifications

- 10,000 AIC rating
- Switching devices must be circuit breakers
- Transfer switch panel must be supplied with neutral and ground

### Combination service entrance loadcentre generator panel CPM126GEN

- Single enclosure (EEMAC 1) to house both loadcentre and generator breakers
- Factory installed main breakers
- Available in 100 and 200 A designs
- Utility and emergency transfer switch breaker factory installed
- Utility breaker and generator breakers are mechanically interlocked to protect equipment and personnel by preventing dangerous dual-source feeding
- Critical loads permanently connected to allow for quick and convenient switching from utility power to stand-by generator power
- Designed for switched neutral applications. Can be reconfigured in field for non-switched neutral applications
- Type BR/DNPL branch breakers sold separately
- Ideal for new and retrofit installations
- EEMAC 1 indoor enclosure design

### Standards and certifications

- CSA approved

### Product specifications

- 10,000 AIC rating for CPM126GEN
- 25,000 AIC rating for CPM236GEN
- Switching devices must be circuit breakers
- Transfer switch panel must be supplied with neutral and ground

**Figure 27. Typical installation diagram**

**Notes:**

Combination service entrance loadcentre generator panels come complete with an integrated emergency generator panel.

Combination service entrance loadcentre generator panels come complete with factory installed utility feeder breaker for emergency generator panel section.

\* Not Included

## Spa panels

### Single-phase, three-wire 120/240 Vac ground fault circuit interrupter spa panels

- Factory assembled, prewired, tested, and ready to install
- Two-pole 5 mA “people protection” Type CH ground fault circuit interrupter circuit breaker
- Two additional one-pole circuits available
- Test button provides a means of confirming proper GFCI circuit breaker operation
- 10,000 A interrupting capacity
- 120/240 Vac single-phase, three-wire
- Pre-installed neutral and ground bars
- Type 3R enclosure good for indoor or outdoor mounting
- Interior deadfront provides protection from energized parts
- Padlockable cover provides added security and safety
- Audible alarm option field installable
- Can be used as a disconnect to turn the spa pump on and off
- Main lug connections will accommodate a single #14–1/0 AWG conductor <sup>a</sup>

<sup>a</sup> Refer to **page 34** for Type CH ground fault circuit breaker accepted load conductor sizes.

### Product description

CEC Rule 68-086 (1) and (6) requires that a ground fault circuit interrupter, of a Class A Type, be installed not closer than 3 m (10 ft) to a pool or spa water. In cases where a spa is installed some distance from your main loadcentre it is often more convenient to locate this protection device in a small panel closer to the spa. Excessive cable lengths required to connect directly back to a protection device in your main loadcentre may be more susceptible to insulation breakage and result in nuisance tripping of the breaker. The reduced distance the owner must travel to reset a tripped circuit breaker in a localized spa panel may also be an excellent selling point for the owner.

### Product selection

**Table 57. Two-pole plug-in Type 3R spa panels**

Breaker amperage (A)	Breaker type	Enclosure style	Audible alarm	Height in inches (mm)	Width in inches (mm)	Depth in inches (mm)	Catalogue number

<sup>a</sup> Outdoor loadcentres accommodate Type DS conduit hubs. Hubs not included. See **page 15** for selection.

**Table 58. Spa panel accessories**

Description	Catalogue number
Field installable audible alarm kit (breaker and panel not included)	<b>CHSPALARM</b>

**Note:** CEC Rule 68-086 (1) and (6) requires that a ground fault circuit interrupter, of a Class A type, be installed not closer than 3 m (10 ft) to a pool or spa water.

Check national and local codes for compliance.

## Surge suppression products

### Stage 1 and Stage 1 Type 2

#### Residential surge suppression products

- Stage 1 surge protection as well as Type 1 and Type 2 offering
- Convenient in-panel mount unit for Type BR loadcentres
- Knockout mount or surface mount CHSP design. DIN mount adapter for Type 1
- Limited lifetime warranty on CHSPT2ULTRA
- Dovetail clip together cable surge accessories for CHSPT2 design
- Flush mount kit for CHSPT2 design knockout mounting
- Type 2 surge suppression product designed to meet CSA C22.2 No.269-2 and UL 1449 3rd edition standard, cULus Listed No. N 024005

#### Product description

Today's homes are filled with increasing quantities of devices containing sensitive electronic components. These devices can easily be damaged by common power surges also some times called line transients, spikes, or voltage impulses. Lighting strikes, utility grid switching, other users on the powerline, and internal surges from air conditioners and powers tools are the most common sources these damaging line transients. To protect your investment it is recommended that a surge suppression device be installed. Surge protection can be broken into two stages. Stage 1 protection is primary protection for your service entrance. This protection is typically installed inside or adjacent to a home's service entrance distribution panel. Stage 2 protection is secondary protection or protection at the point of use. For proper surge protection both a stage 1 and stage 2 device must be installed. Eaton offers surge products to provide stage 1 protection to your sensitive equipment as well as both Type 1 and Type 2 surge devices that meet the latest CSA C22.2 No. 269 and UL 1449 3rd standard. We also offer surge protection devices for cable/satellite and Ethernet protection since surges are not isolated to the utility lines only.

#### Product selection Combination of Surge Protection and Surge/Breaker Protection

Ideal for applications with limited space in the panel.

- a Maximum continuous operating voltage that may be applied to the device per mode.
- b Voltage protection rating is the measured limiting voltage after a surge event.
- c Nominal discharge current is the current that the device can withstand for 15 impulses.
- d The amount of current the product can withstand under short circuit conditions.
- e The maximum one time surge current rating per phase.
- f When used with a 50 A two-pole breaker, 10 kA when used with a 15 A two-pole breaker.
- g CHSPT22PACK contains one each of CHSPT2ULTRA, CHSPCABLE.

**Accessories**

CHSPCABLE

**Table 61. Residential surge suppression accessories**

Description	Application	Product warranty	Connected equipment warranty	Maximum surge current (A) <sup>a</sup>	Catalogue number
SurgeCable™	Cable TV, satellite, cable modems (2 lines)	Lifetime	\$10,000	20,000	<b>CHSPCABLE</b>
Flushmount Kit™	Flush mount kit for finished wall installations	—	N/A	N/A	<b>CHSPFMKIT</b>

- a Maximum surge rating is the sum of all modes of protection.

**Installation**

CHSP and accessories can be mounted on the side, top, or bottom of a circuit breaker panel.

**Note:** CHSP SURGE, ULTRA or the 2-pack can be used interchangeably depending on protection required.

## Street lighting panels

### In-pole

### Service entrance approved street and roadway lighting panels

- Compact in-pole panel fits into lighting pole hand well
- Pole mount 3R (rain-tight) street lighting panels can be mounted right onto the pole
- Pedestal mount 3R (rain-tight) street lighting panels feature a Eaton loadcentre housed in a Pencil enclosure

### Product description

Since January 1, 2003 the Ontario Electric Safety Code requires that all roadway lighting shall meet the service entrance requirements of Rule 30-1002. Eaton has developed several designs of approved products to suit the various installation points (pole mounted, within an enclosure etc.). All products are CSA approved.

### In-pole street lighting panels

- Fits into most pole manufacturers' hand well
- Service entrance approved
- 3R rain-tight
- Pre-wired
- Single- or two-pole, 22 kA, 50 A versions
- Removable mounting plates accommodate multiple hand wells
- CSA approved
- Approximate dimensions 9 x 2.25 x 4 inches
- Line power connections via #6 AWG conductor pigtail
- Load power connections via #14 AWG conductor pigtail
- #6 AWG conductor pigtail provided for daisy chaining of additional light poles

### Product selection

**Table 62. In-pole street lighting panels**

Description	Voltage (Vac)	Main circuit breaker	Interrupting (kAIC)	Catalogue number
120 Vac in-pole compact street lighting panel	120	Single-pole 15 A	22	<b>1SL150PCO</b>
120 Vac in-pole compact street lightning panel	120	Single-pole 30 A	22	<b>1SL300PCO</b>
120 Vac in-pole compact street lighting panel	120	Single-pole 50 A	22	<b>1SL500PCO</b>
240 Vac in-pole compact street lighting panel	120/240	Two-pole 15 A	22	<b>2SL150PCO</b>
240 Vac in-pole compact street lighting panel	120/240	Two-pole 30 A	22	<b>2SL300PCO</b>
240 Vac in-pole compact street lighting panel	120/240	Two-pole 50 A	22	<b>2SL500PCO</b>

**On-pole**

**On-pole street lighting panels**

- Mounts directly onto the pole
- Strap mount version includes slots in the enclosure back to allow for strap mounting
- Two extra 1-inch breaker locations that accept Type BR and DNPL plug-in circuit breakers for additional lighting loads
- Service entrance approved
- 3R rain-tight
- Single- or two-pole, 22 kA, 50, 60, or 70 A versions
- CSA approved
- Approximate dimensions 13 x 11 x 4.50 inches
- Bottom entry service entrance cabling only

**Pedestal**

**Pedestal mounted street lighting panels**

- Lightweight, stand-alone units mount on the ground
- Polyethylene Pencil enclosure provides rugged, low profile, rain-tight assembly
- Penta head and key lock provision for security
- Vented or non-vented enclosure styles
- Two extra 1-inch breaker locations accept Type BR and DNPL plug-in circuit breakers for additional lighting loads
- Service entrance approved
- 3R rain-tight
- Single- or two-pole 22 kA, 50, 60, or 70 A versions
- CSA approved
- Underground duct or direct burial cable accessible

## Combined loadcentre and meter socket

### Combined loadcentre and meter socket

- 4 Jaw, 100 and 200 A, 120/240 V, 22 kAIC
- Service entrance rated with 100 or 200 A main circuit breaker included
- Suitable for underground or overhead service entrance
- Meter socket mechanical lugs accommodate #6–250 MCM Cu/Al line conductors and (2) #6–300 MCM Cu/Al neutral conductors
- Loadcentre mechanical lugs load and neutral (2) #6–300 MCM Cu/Al
- CSR circuit breaker mechanical load lugs #2–300 MCM
- Suitable for overhead or underground service entrance
- Suitable applications include farming, temporary service, construction sites, trailers, and mobile homes
- Hub opening and plate included. Hubs ordered separately (use DS type hubs)
- 3R enclosure
- CSA approved

### Product selection

<sup>a</sup> Accommodate Type DS conduit hubs. Hubs not included. See **page 15** for selection.

## Metered temporary ground fault power panel

### Metered temporary power panel with ground fault protection

- Combination loadcentre, meter socket, and electrical outlets for temporary work site installations
- Single-phase, three-wire
- 4 jaw, 100 or 200 A, 120/240 V, 22 kAIC meter socket
- Suitable for overhead or underground service entrance
- CSA approved for service entrance
- 3R enclosure suitable for outdoor installations
- Two different receptacle combinations 6X20A and 2X30A or 10X20A
- Hub opening and plate included. Hubs ordered separately (uses DS type hubs)
- Meter socket mechanical lugs accommodate #6–250 MCM Cu/Al line conductors and #6–300 MCM Cu/Al neutral conductors

## Mini-power centres

### Mini-power centres

- Distribution transformer, breaker protection, and loadcentre all in one compact package
- Primary and secondary breaker protection via factory installed EHD or FDB type MCCBs
- 18, 25, or 35 kAIC interrupting capacity versions available on select models through special order
- Two styles of interior; one for plug-in or bolt-on (breakers not included)
- Loadcentre accommodates up to 24 feeder circuit breakers (breakers purchased separately)
- Aluminum chassis on plug-in type, copper chassis on bolt-on type, standard ground bar, and enclosure grounded neutral bar
- All live parts are enclosed
- Hinged, padlockable cover prevents removal
- Enclosure includes grounding terminal
- Type 3R enclosure with baked polymer polyester powder coating is good for indoor or outdoor mounting
- Optional Type 3R, 316 grade stainless steel enclosure
- Main circuit breaker barrier provides CSA approval for service entrance applications
- Electrical grade aluminum windings standard on the distribution transformer (copper optional)
- Copper windings standard on bolt-on style units
- 185 °C insulation system
- 115 °C winding temperature rise
- Full capacity taps (FCBN) 2–5%
- Resin encapsulated, core-coil assembly (cores grounded with copper lead)

### Product description

Contemporary electrical distribution systems are required to do more in less space while at the same time being cost-effective. Eaton provides a solution to these requirements with the proven mini-power centre. It occupies considerably less space and can save up to 31 percent of the installation costs normally required when individual components are used. The solution is possible because a mini-power centre combines three individual components into one NEMA Type 3R enclosure: a main breaker, an encapsulated Type EP or EPT dry-type transformer, and a secondary distribution loadcentre with main breaker. Interconnecting wiring is completed at the factory. A mini-power centre is delivered ready for installation. It's suitable for use as service entrance equipment, too. Mini-power centres are used wherever there is a 480 V or 600 V distribution system and loads requiring 208Y/120 V three-phase or 120/240 V single-phase.

Typical installations include:

- Industrial plant assembly lines
- Plant expansions
- Commercial buildings
- Test equipment
- Temporary power at construction sites
- Sewage disposal plants
- Warehouses
- Car washes
- Parking lots

The mini-power centre saves you space, time, and money. A mini-power centre installation takes up only 42% of the space taken up by a typical installation. A typical installation being comprised of a separately mounted distribution transformer, disconnect switch, loadcentre and all associated wiring and connectors.

The installation costs of a mini-power centre are 31% less when compared with the same typical installation.

Installation	Time to perform task(s) a (hours)			
	Typical installation 15 kVA	Mini-power centre installation 15 kVA	Typical installation 25 kVA	Mini-power centre installation 25 kVA

<sup>a</sup> Main circuit breakers fixed only. No substitutes.

<sup>b</sup> Feeder circuit breakers not included. Uses Eaton Type BAB circuit breakers.

<sup>c</sup> Combinations can be selected.

<sup>d</sup> Not for construction purposes.

## Residential fuse panel inserts

### Residential fuse panel inserts <sup>a</sup>

- Convenient and economical option to completely replacing an entire fuse panel assembly
- Original fuse panel tub and wiring remains in place and only the fuse panel trim and interior is removed and replaced
- 16 and 24 circuit breaker interiors designed to fit any manufacturers' fuse panel or discontinued design circuit breaker panel
- Custom trim and door oversized to ensure fit with existing tub
- Circuit breaker interior replacement eliminates the possibility of improperly sized amperage protection
- No more loose fuses causing arcing and damage to the panel or wiring
- CSA certified to mount into any existing box under file LL264-222
- Can be mounted in any orientation as defined by the existing fuse panel tub orientation
- Accepts plug-in Type BR, DNPL, or GFCB circuit breakers (circuit breakers sold separately, refer to **page 17** to **page 20** for selection)
- Trim comes complete with hinged door, non-locking spring latch, clear plastic card holder, and circuit directory card
- Tin plated aluminum bus bars

<sup>a</sup> Not for use as service entrance equipment.

### Product description

Fuses and fuse panels were designed decades ago, to prevent the overload of circuit wiring that could lead to fires caused by overloaded electrical circuit connections and/or short circuits. Records show however, that problems of fire and smoke inhalation are the more serious causes of death or injury.

Since early 1960's, technology has allowed a tremendous increase in the number and use of appliances, tools, and control systems, many of which are automatically controlled and cycle on and off. We now know that a cycling load will actually cause a plug (screw-on-type) fuse to loosen in its holder (that explains why you can always find one or two fuses that can be tightened a quarter turn). Loose connections such as these develop heat, and in turn increase the risk of fire.

Small overloads can be absorbed by the margin of safety built into CSA certified devices. However, prolonged overloads or loose fuses will cause arcing and ultimately, melting of the connections in either the panel or wiring, wherever the weakest link may be.

Eaton has designed a low cost method of replacing fuse panels with modern circuit breaker panels. This method eliminates the need for cutting, re-plastering and repainting the walls around the old panel.

Another risk with the old fuse panel design was the ease with which incorrect fuses could be used or changed without realization of the risks involved.

To eliminate these potential hazards Eaton has a new circuit breaker interior and trim kit that will quickly upgrade the existing installation to today's electrical standards and needs. An average upgrade takes one hour and thus creates the minimum of inconvenience to the homeowner/occupant.

### Sample specification

- Supply and install a new circuit breaker interior to replace existing plug fuse panel interior or out of date circuit breaker interior in each apartment or condominium
- Interior to be 16 or 24 circuit, rated 100 A and 120/240 V, designed in a single row breaker arrangement for fitting into existing recessed electrical panels
- Supply and install new trim and door assembly slightly larger than discarded fuse trim to minimize any requirements for patching or repainting
- Bus bars shall be tin plated aluminum suitable for plug-in circuit breakers
- Supply and install a trim and door assembly with latch, to protect the circuit breaker toggle handles
- Inserts must be CSA certified for mounting in any position, for ease in connecting to existing wiring
- Install circuit breakers with ratings as indicated in specifications or drawings
- Interiors to be mounted with directions template and hardware supplied by Eaton
- Inserts, trim and door assembly and circuit breakers, shall be manufactured by Eaton
- Provide a circuit identification card, mounted under clear plastic on the inside of the door

**Insert interiors**

**Residential fuse panel insert interiors**

- 100 A single-phase, three-wire 120/240 Vac
- 16 and 24 circuit breaker capacity <sup>a</sup>
- CSA certified to mount into any existing box under file LL264-222
- Accepts plug-in type BR and DNPL circuit breakers <sup>ab</sup>
- Tin plated aluminum bus bars
- Neutral available with 16 or 24 Cu/Al terminals
- Main and neutral lugs located at the same end
- All terminals accept #14–3 AWG cabling

<sup>a</sup> Filler plates for unused fuse panel insert circuit breaker installation locations can be ordered as BRFP (package of 24).

<sup>b</sup> Refer to **page 17** to **page 20** for plug-in circuit breaker selection.

**Table 75. Three-wire 120/240 Vac fuse panel insert interiors**

Amperage rating (A)	Voltage (V)	Number of installable circuit breakers		Bus material	Neutral material	Wire size range Cu/Al	Catalogue number	Drilling template catalogue number <sup>a</sup>
		1-inch spaces	1/2-inch spaces					
100	120/240	8	16	Aluminum	Aluminum	#14–3 AWG	CQLP8100	CSABP4683B
100	120/240	12	24	Aluminum	Aluminum	#14–3 AWG	CQLP12100	CSABP4734B

<sup>a</sup> We suggest the use of templates to ensure proper sizing for installation.

**Trims**

**Residential fuse panel insert trims**

- Doors are die formed with sloping sides and rounded corners and permanently mounted to the trim
- Semi concealed hinges <sup>a</sup>
- Includes circuit directory card and self adhesive clear plastic directory holder
- Painted ASA61 light grey baked on enamel
- Mounting hardware included <sup>b</sup>
- Trims are custom sized larger than the existing trim and door
- Mounting holes located to line up with existing box holes <sup>c</sup>

- <sup>a</sup> If the main service entrance is bottom entry, the door hinges left. If it is top entry, then the door hinges right.
- <sup>b</sup> The hardware supplied will accommodate boxes that are mounted up to 1/2-inch too deep or equal to 3-1/2 inches net depth.
- <sup>c</sup> Measure the existing box holes locations as they may be part of the end walls, side walls, or tapped into a box flange.

<sup>a</sup> Panel insert CQLP8100 can also be used with this size trim.

<sup>b</sup> For box sizes either 26 inches or 27-1/2 inches high, no insert or trim is available.

## Replacement classic circuit breakers

### Bolt-on Type BQL single-, multi-pole, Duplex, and Quadplex

Type BQL <sup>a</sup>

- 10,000/22,000 A interrupting capacity at 120/240 Vac
- Captive line screw included (#2 Robertson/Slot)

<sup>a</sup> HACR rated.

Product selection

**Bolt-on Type BQL ground fault and moulded case switches**

Type BQL ground fault circuit breakers

- 10,000 A interrupting capacity at 120/240 Vac
- 5 mA “people protection”

Product selection

5 mA single- and two-pole bolt-on ground fault circuit breakers are no longer able to be manufactured due to change in UL standard to require all GF devices to “Self Test.”

Type BQL non-automatic circuit breakers (moulded case switches)

- 240 Vac
- Two- and three-pole versions

Non-automatic circuit breaker (moulded case switch)

**Table 79. Two- and three-pole bolt-on non-automatic circuit breakers (moulded case switches)**

Ampere rating	Wire size range Cu/Al 60 °C or 75 °C (AWG)	Catalogue number	
		Two-pole, 240 Vac	Three-pole, 240 Vac
60	#8-1 Cu #8-1/0 Al	<b>BQL260NA</b> Requires two 1-inch (25.4 mm) spaces	<b>BQL360NA</b> Requires three 1-inch (25.4 mm) spaces

**Note:** When the Canadian Electrical Code requires the use of an unfused disconnect device as a local isolation switch, then a circuit breaker enclosure may be used in conjunction with a moulded case switch (a.k.a. a non-automatic circuit breaker). For example, with an air conditioning unit, the protective device for these applications is located upstream.

**Bolt-on Type QBH single-, multi-pole and accessories**

Type QBH

- 120/240 Vac
- 3/4-inch form factor
- Designed to fit the classic CEB, Sylvania or Commander Electric design bolt-on loadcentres
- Suitable for loadcentres, lighting and distribution panelboards, and meter centres
- Silver Tungsten contacts with wiping action to prevent carbon buildup on the contact surface
- Handle provides clear indication of ON/OFF/TRIPPED position
- Quick-make / quick-break mechanism provides tease-proof operation
- Internal common trip mechanism on two-pole circuit breakers
- Each breaker is electronically calibrated for 40 °C
- Compression moulded housing and handle for durability and service

**Table 80. Single- and two-pole bolt-on classic replacement circuit breakers**

175	#2–300 MCM	<b>BJ2175</b>	<b>BJ3175</b>
200	#2–300 MCM	<b>BJ2200</b>	<b>BJ3200</b>
		Requires four 1-inch (25.4 mm) spaces <sup>a</sup>	Requires six 1-inch (25.4 mm) spaces <sup>b</sup>

<sup>a</sup> When mounted, the Type BJ circuit breakers span both sides of the bus bar occupying an equivalent number of pole spaces on both the left and right side of the loadcentre. For example a two-pole Type BJ circuit breaker occupies 2 pole spaces on the left and the same number of spaces on the right thus requiring four 1-inch spaces.

<sup>b</sup> When mounted, the Type BJ circuit breakers span both sides of the bus bar occupying an equivalent number of pole spaces on both the left and right side of the loadcentre. For example a three-pole Type BJ circuit breaker occupies 3 pole spaces on the left and the same number of spaces on the right thus requiring six 1-inch spaces.

## Pressure switches

- Ensures smooth delivery of water into your home
- Commercial, residential, or agricultural applications
- Can be used on all types of pumps
- Pressure ratings 20–40 PSI, 30–50 PSI, and 40–60 PSI
- Adjustable cut-in and cut-out pressure
- Easy installation
- CSA certified and UL listed
- Pulsation plug models prevent pump cycling due to water surges
- Low pressure cut-off models prevent pump burn out due to lack of well water (10 PSI below turn on pressure)
- 3-year product warranty
